VIKASH VERMA

(Aspiring Business Analyst)

New Delhi, India | +91 9506431128 | vikashverma566@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

Entry-level Business Analyst with a Computer Science background and project-based experience in business process analysis, requirements documentation (BRDs, user stories, and UAT), SQL, and Power BI. Skilled in analysing business requirements, documenting workflows, and developing data-driven insights to support business decision-making.

TECHNICAL SKILLS

- **Business Analysis:** Requirements Analysis, BRD, FRD, User Stories, Acceptance Criteria, RTM, Gap Analysis, UAT, Agile/Scrum.
- **Data & Reporting:** SQL, Data Analysis, KPI Reporting, Data Visualization.
- **Tools:** Power BI, DAX, Excel, Jira, Python (basic), GitHub.

PROJECTS

E-commerce Order Management System | Business Analyst Case Study | GitHub

Business Analysis, BRD, Agile/Jira, SQL, Power BI, DAX, UAT, RTM, Excel

- Analyzed an e-commerce order lifecycle affected by payment failures, inventory mismatches, cancellations, delayed deliveries and support tickets.
- Created stakeholder analysis, As-Is/To-Be process maps and a BRD covering 12 functional and 7 non-functional requirements.
- Converted requirements into user stories with acceptance criteria and a Jira-style backlog containing epics, stories, tasks and bugs.
- Built a relational SQL model and analyzed order delays, payment failure, returns, delivery time, revenue and customer complaints.
- Defined a Power BI semantic model and KPI dashboard for order volume, cancellation, payment failure, SLA, returns, revenue and complaints.
- Created UAT scenarios and an RTM linking business requirements → functional requirements → user stories → test cases → results.

IT Service Desk Ticket and SLA Analytics | (Practice project using synthetic data) | GitHub

BRD, UAT, SQL, Jira, Power BI, DAX, Python (Flask), Jira, Excel, RTM

- Built an IT Service Desk SLA analytics prototype using MySQL, Python/Flask, SQL KPI analysis and Power BI to explore ticket volume, SLA compliance, resolution time and priority using synthetic data.
- Documented service-desk KPI definitions and validation steps, including SLA denominator checks, resolution-time population and SQL-to-Power BI reconciliation.
- Developed an advisory ticket-category classification proof of concept and documented human-review safeguards and evaluation requirements.

Jewellery Sales Analytics Dashboard | GitHub

Python, Excel, SQL, Power BI, DAX

- Built an end-to-end retail analytics solution using a synthetic dataset (500+ transactions) modelled on Gold, Silver, and Diamond category sales, inspired by real business patterns from running a jewellery retail operation.
- Developed data pipeline using Python (OpenPyXL), performed data cleaning and analysis in Excel/SQL, and created an interactive Power BI dashboard.
- Analyzed revenue trends, category performance, customer behaviour, payment methods, and city-wise sales distribution.
- Identified key business insights including seasonal sales patterns, category revenue contribution, and high-value customer transactions.

CERTIFICATIONS

- **SQL for Data Analysis | SimpliLearn**
- **Design Power BI reports | Microsoft Learn**

EDUCATION

B. Tech: Computer Science and Engineering | *JSS Academy of Technical Education, Noida (U.P.)* 2016 – 2019

Diploma: Computer Science Engineering | *SAMS Group of Institutions, Varanasi (U.P.)* 2013 – 2016
